PEAR - PHP Extension and Application Repository

About PEAR

PEAR is a framework and distribution system for reusable PHP components. More **information** about PEAR can be found in the [online manual](#) and the [FAQ](#).

If you are a first time user, you might be especially interested in the manual chapter "[About PEAR](#)".

Recent **news** about PEAR can be found [here](#).

PEAR provides the above mentioned PHP components in the form of so called "Packages". If you would like to **download** PEAR packages, you can [browse the complete list](#) here. Alternatively you can search for packages by some keywords using the search box above. Apart from simply downloading a package, PEAR also provides a command-line interface that can be used to automatically **install** packages. The manual [describes this procedure](#) in detail.

In case you need **support** for PEAR in general or a package in special, we have compiled a list of the [available support resources](#).

If you have been told by other PEAR developers to sign up for a PEAR website account, you can use [this interface](#).
